SECRET/SECURITY INFORMATION

"O.,

Dunapata; /4638n-1859E/. There was no naval base located in this (e) any war vessels there. The stone construction harbor, nor 50X1 quay was about 20 m long and four m wide. There were two single-50X1 storied buildings which served as offices for the Meszhart and SDGP no warehouses, stored frieght, cranes, or other agencies. 50X1 loading facilities. Dunafoldvar /4648N-1855E7. (f) the harbor was located on the western bank of the 50X1 there was a shipyard there. Only Meszhart passenger Danube and 50X1 boats were ever seen in the harbor. Due to the current and the narrowness of the channel, it was necessary to stop the convoy some distance from the bridge and tow only one or two barges at a time under the bridge. some Hungarian Danube patrol boats Budapest See Encl (A)7. (g) in this harbor; they had six pontoon mooring stations along the 50X1 Budapest section of the Danube. Two of these stations were near the Budafok harbor area, one on each bank of the river, two in the Parliament building area, one on each bank of the river, and two about 1500 m upstream from the Parliament on each side of the river. The Csepel Island Harbor was used by all Danube vessels, with the exception of Yugoslav craft. There were two basins in this harbor; 50X1 one of these basins was used exclusively for loading petroleum products (I never saw this basin). The other basin was used for the overnight berth of the Sovrom convoys. 50X1 Petroleum products and cereals were loaded (and unloaded) at this harbor. When petroleum tankers were loaded, the tankers were towed into the respective basin by the convoy's tug or the basin's tug and left there until the return trip downstream. When the convoy returned the tankers were found tied outside the basin, loaded and ready to be taken downstream. The petroleum products 50X1 were loaded only on tankers going downstream. All the transports had to leave their barges in the Csepel Harbor area or, if not, take them upstream to the Obuda area, about two km upstream from the last bridge. Only tugs had the right to tie up in the Pest Harbor area. My tug (with the crew aboard) tied up in the Pest Harbor area about 1500 m upstream from the Parliament building area, for the tug's master check with the harbor master's office, the SDGP office and the Sovrom office. The crew's customs check was usually made in the Csepel Harbor area or the Obuda area. The Mezshart shipyards were 50X1 located on the Pest side of the Danube across from the northern section of Margaret Island, and the southern section of Obuda Island. There were two floating docks with two ships under construction there. These ships were observed during the March - June 1951 period. These two ships appeared to be of approximately 600 tens' capacity. 50X1 only the hulls were ready; however, work was going on inside the hulls. two smaller vessels 50X1 An undetermined number of there undergoing repair work on water. 50X1 tugs belonging to Meszhart were under repair. both seagoing (600 tons) 50X1

painted OD. the vehicles were destined for Reni, and some of the trucks for the Danube-Black Sea canal project. Cereals from downstream ports were unloaded in this harbor.

Czech ground forces troops and Soviet infantry and artillery troops in the town (details unknown). The bridge across the Danube, located at the western outskirts of the town was in good condition, but never observed any traffic or pedestrians crossing this bridge. Czechoslovakian Army guards were on the bridge.
